PROFILE

Second-year Computer Science (Year in Industry) student at the University of Kent with two software internships and ongoing paid client work. I build backend systems in C#/.NET, Node.js and Next.js against SQL Server, and have led two hackathon teams to awards. Seeking a 12-month placement from summer 2027 in software engineering, consulting or technology.

EXPERIENCE

Freelance Full-Stack Developer (paid client contracts) 2026 to present

- **Country Materials Limited (Tanzania):** built the corporate website for a construction materials and recycling company in Next.js with Sanity CMS, including an ERP catalogue sync endpoint and legal compliance pages (countrymaterial.com).
- **Sultan Mauritius:** built and launched a bilingual e-commerce site in Next.js with Prisma and Sanity CMS (sultanmauritius.com).
- **AmCham Mauritius:** building a self-hosted intranet on an open-source messaging platform, designed to meet both Mauritian and US legal requirements.

Software Developer Intern, Imatic Technologies Limited Jun 2026 to Sep 2026
Dar es Salaam, Tanzania

- Built the attendance module for SmartERP, the company's ERP product, in Next.js and SQL Server within a four-person team. It is now in user acceptance testing.
- Designed the 8-table schema with a read and a write stored procedure per table, and made the module multi-company so one deployment serves several client companies.
- Found that the clock-in device import was silently discarding 2,478 of 14,888 real records, and fixed it at the database level with a corrected unique index.
- Processed a full month of data (49 employees, 13,487 records) with no failures in about 1.5 seconds by isolating each employee in its own transaction.
- Built the dashboard (daily KPIs, filterable roster with CSV export, exceptions panel, weekly calendar) and wrote unit and integration tests against SQL Server.
- Deployed to Windows Server under IIS with signed session cookies, per-IP rate limiting, a Content Security Policy and separate admin and operator access.
- Led the team's framework evaluation by building the same 9-endpoint API in C#/.NET 8 and in Node.js, and delivered a reporting proof of concept that informed a decision covering more than 300 reports.
- Redesigned the MUA portal's landing page and interface components, now in production.
- Introduced the team to Claude Code, cutting UI updates that took days to a few hours.

Software Developer Intern, CubeStone Consulting Jan 2026 to Mar 2026
Dar es Salaam, Tanzania

- Built a fleet management REST API on my own in C# with Dapper against SAP HANA: about 40 endpoints, the database schema, bearer-token login and per-employee permissions.
- Delivered the React Native (TypeScript) app for it, covering maintenance scheduling, work orders, fuel logs and PDF reports (code sample).

PROJECTS AND AWARDS

FraudLens AI | Winner, Finnovate Hackathon 2026 Sep 2026

Team lead of five, backend owner | Node.js, TypeScript, Next.js, Ollama

- Scam checker for messages, links and emails in English, French and Kreol Morisien, live at fraudlens.site with a published Chrome extension.
- Designed a deterministic rule engine with about 70 signal codes that owns the verdict, so the language model only interprets text and cannot decide outcomes alone.
- 631 backend tests; 73% recall and 100% precision on 84 test messages with the model switched off.

BlueNet: Ocean Watch | Judge's Choice Award, Build with Gemma Hackathon Aug 2026

Team lead of five, backend | Gemma, function calling

- Built the backend for an illegal fishing triage system: code flags vessel tracking anomalies and a Gemma agent investigates each vessel and ranks cases for the coast guard.
- Built for Mauritius's 2.3 million square kilometre sea area, patrolled by three boats.

Concurrent TCP Chat Server | Go Jul 2026

- Multi-client server with a goroutine per client and mutex-guarded state; traced and fixed deadlocks and race conditions under concurrent load (code).

Vending Machine Simulation | Python, SQLite Jun 2025

- Tkinter client with a multithreaded TCP socket server, SQLite persistence and sales analytics (code).

1st Runner-Up, Middlesex University Speed Coding Competition Apr 2026

- Solved 6 of 13 sequential Python problems in a pair, equal to the highest count of any team.

Oracle Academy Database Foundations Certificate Feb 2026

EDUCATION

University of Kent, Canterbury Sep 2026 to Jun 2029

BSc (Hons) Computer Science with a Year in Industry, Stage 2 *In progress*

Algorithms; Database Systems Autumn 2026

Fundamentals of Artificial Intelligence; Fundamentals of Cyber Security Spring 2027

Web Development; Software Development Summer 2027

Middlesex University Mauritius 2025 to 2026

BSc (Hons) Computer Science (Systems Engineering), Year 1 completed *120 of 120 credits*

- First Class (Grade 1, the highest grade) in every graded module:

Computer Systems Architecture and Operating Systems	Grade 1, First
Programming for Data Communication and Networks	Grade 1, First
Information in Organisations	Grade 1, First
Foundations of Computing (graded pass or fail only)	Pass

SKILLS

Languages	C#, TypeScript, JavaScript, SQL, Python, Go, Java
Backend and data	.NET 8, ASP.NET MVC, Node.js, REST API design, SQL Server and stored procedures, SAP HANA, Dapper, Prisma, SQLite
Frontend	Next.js, React, React Native (Expo)
Infrastructure	Docker, Azure, IIS, Linux, Git, GitHub Actions, Tailscale
Spoken	English and Hindi (native), Maithili (mother tongue)
